

Advanced Coupa Analytics Training Course

Typical software implementation training provides the basic foundational elements of getting started. This course is designed to help you take that learning to the next level.

You will learn to use Coupa Analytics, a powerful tool that provides you with actionable insights into your procurement performance, spend patterns, supplier relationships, and savings opportunities.

The course consists of 15 hours of interactive learning, divided into five modules. Each module covers a specific aspect of Coupa Spend Analytics and includes a combination of lectures, demonstrations, exercises, quizzes, and case studies. You will view the teacher demos in both a practice environment as well as your company's Coupa instance.

Analytics Course is designed for all levels of participants using Coupa Spend Analysis.
